

Imprinters

For Signing, Imprinting and Endorsing Cut Sheet Forms

Nothing matches the speed, accuracy and versatility of this imprinter. Easy-to-use, the Model 288 Imprinter handles a wide range of document types and sizes. The same unit can sign payroll or payables checks, and endorse receivable checks. It's great for signing, marking or validating certificates, transcripts, letters and other documents too!

Ideal for laser produced single sheet documents, many companies also use the 288 to sign or imprint their continuous forms. They prepare and then burst their continuous forms and imprint them as cut sheets.

Dual keys control the operation and access to the imprint plates, while resettable and non-resettable counters track every impression. Optional tri-color or fluorescent ink provides a distinctive and secure signature or mark.

Newly designed controls are easy to understand and use.

CA CUMMINS Model 288 Imprinter/Signer/Endorser

Signing

While checks are the most commonly signed documents, this versatile imprinter also signs letters, certificates, transcripts and other documents. A tri-color or fluorescent imprint can be used when greater security is important.

Endorsing

The 288 can be used to endorse checks, food stamps, and other negotiable documents. Endorsements can be placed anywhere on the document and meet the Federal Reserve Bank "Reg CC" requirements for checks. Dates or batch numbers can also be added.

Signing checks or letters, validating certificates, endorsing checks, the versatile 288 does it all. Indeed, you can use the same 288 for all of these functions, simply by changing imprint plates and forms settings.

Imprinter with hopper fully extended

Imprinting/Validating

Imprints can be words, logos, seals, signatures or any combination. And, they can be imprinted anywhere on any of the wide variety of forms handled by the Model 288. Large or small, thick or thin, this imprinter can even "crash imprint" through multi-layer carbon and carbonless self-mailers.
